

How to add a none certified LILIN Control4 device driver to your Control4 project

To add a none LILIN certified drive to your control 4 project simply download the correct uncertified drive from a reliable online source.

- Ensure your Control4 Composer software is closed.
- Copy uncertified LILIN driver file in to your Control4 driver's folder located on your PC.
- Start Control4 Composer.

Once Control4 composer has started, the none certified LILIN device will now be discovered automatically under the discovery tab due to the LILIN device running SDDP.

To add this to your Control4 project, simply double click the device (under the discovered tab) and the relevant driver will be added to your project.
