

Merit LILIN Application Note

How to display one NAV's desktop live video into another physical NAV's channel.

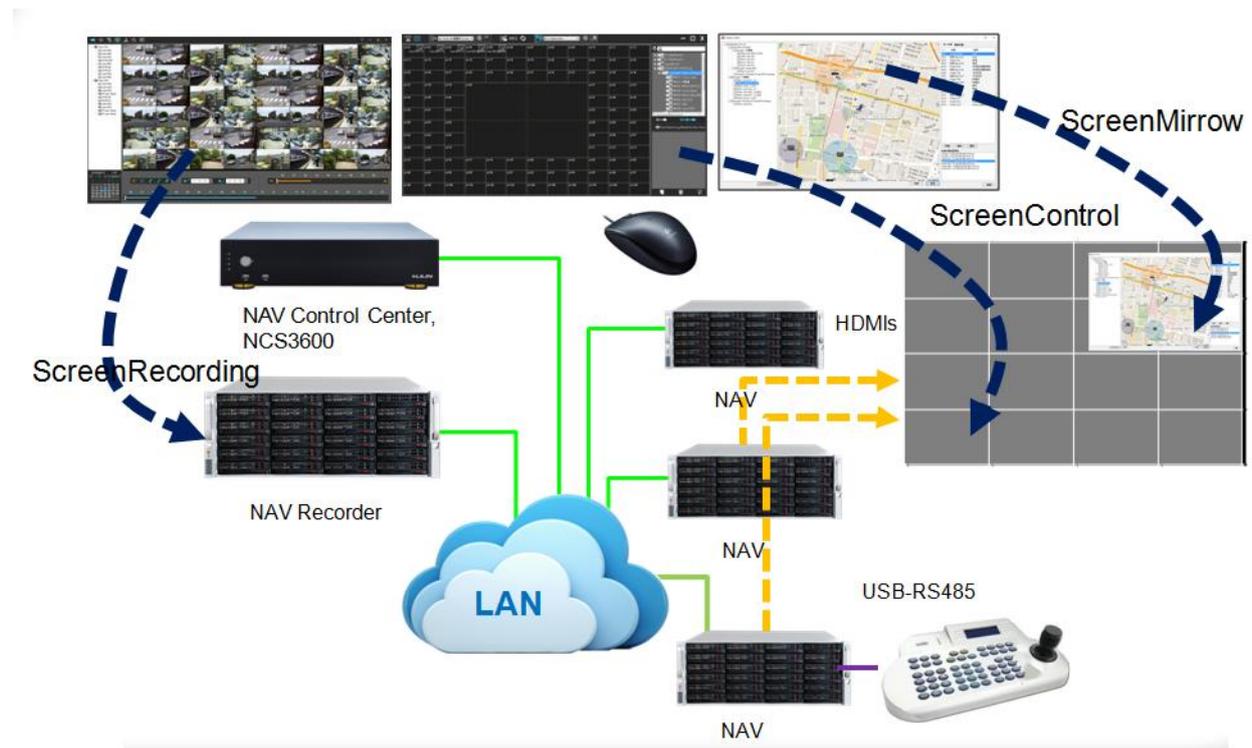

Document Number: A00132
Date: 08/14/2017
Dept: Technical Support, Taipei

Subject: This document describes how to display one NAV's desktop live video into another physical NAV's channel.

Requirements:

Navigator Enterprise V2.0.0.22 or above.

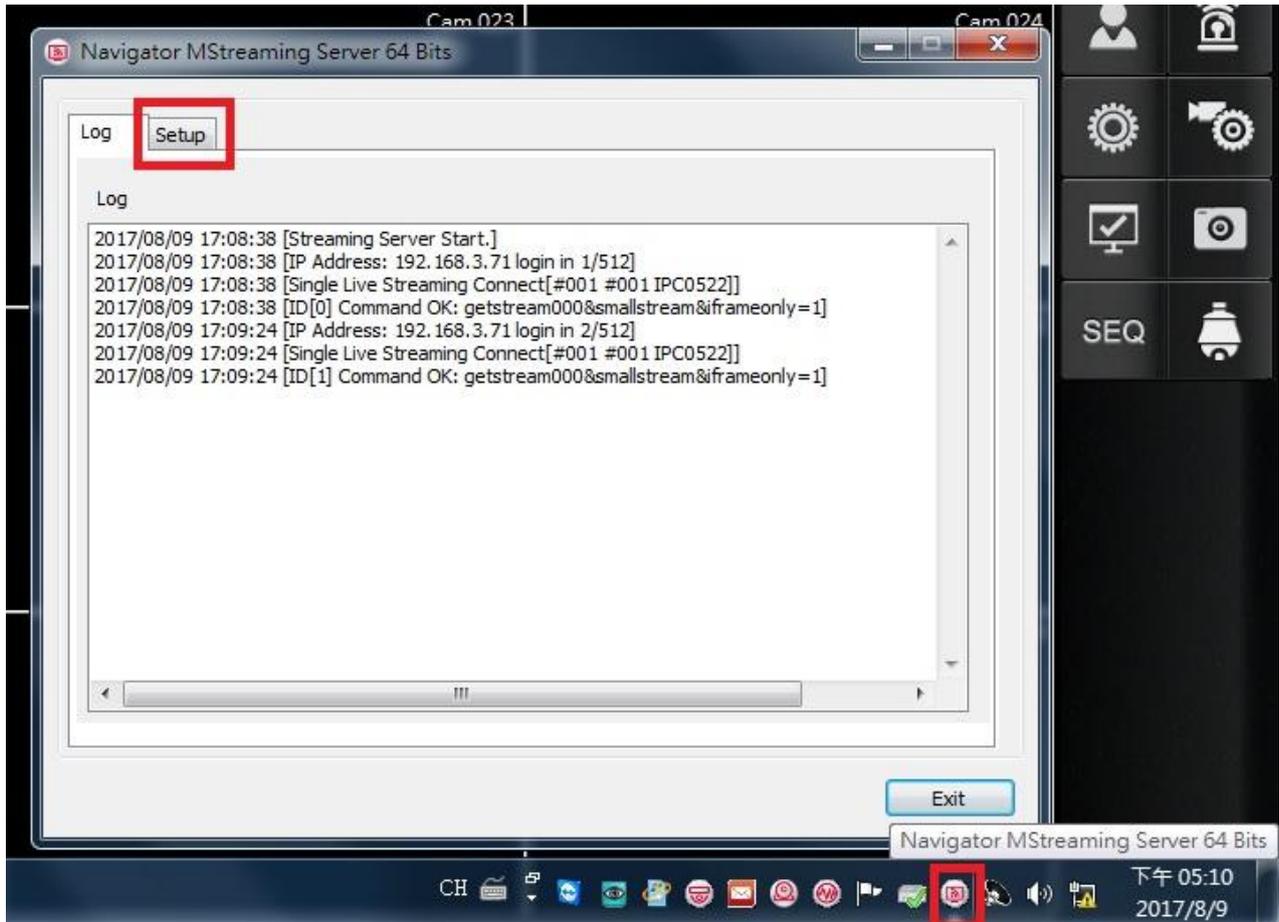

At least two PCs with Navigator Enterprise installed

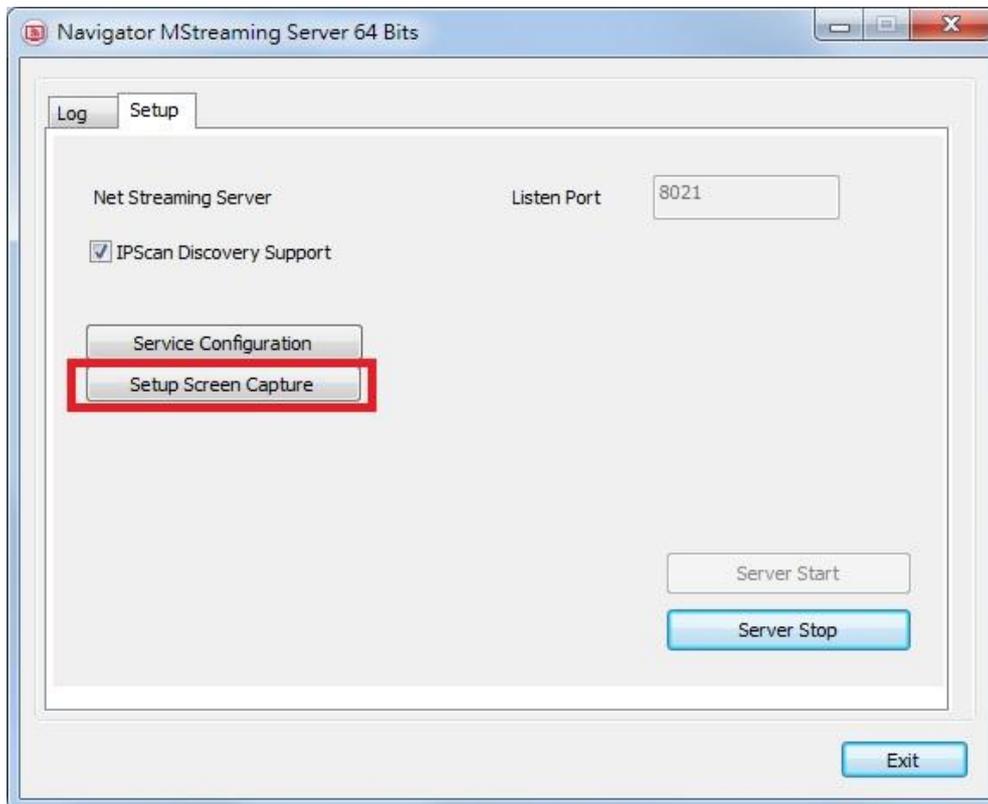

Settings: Please follow steps as below.

PC #1

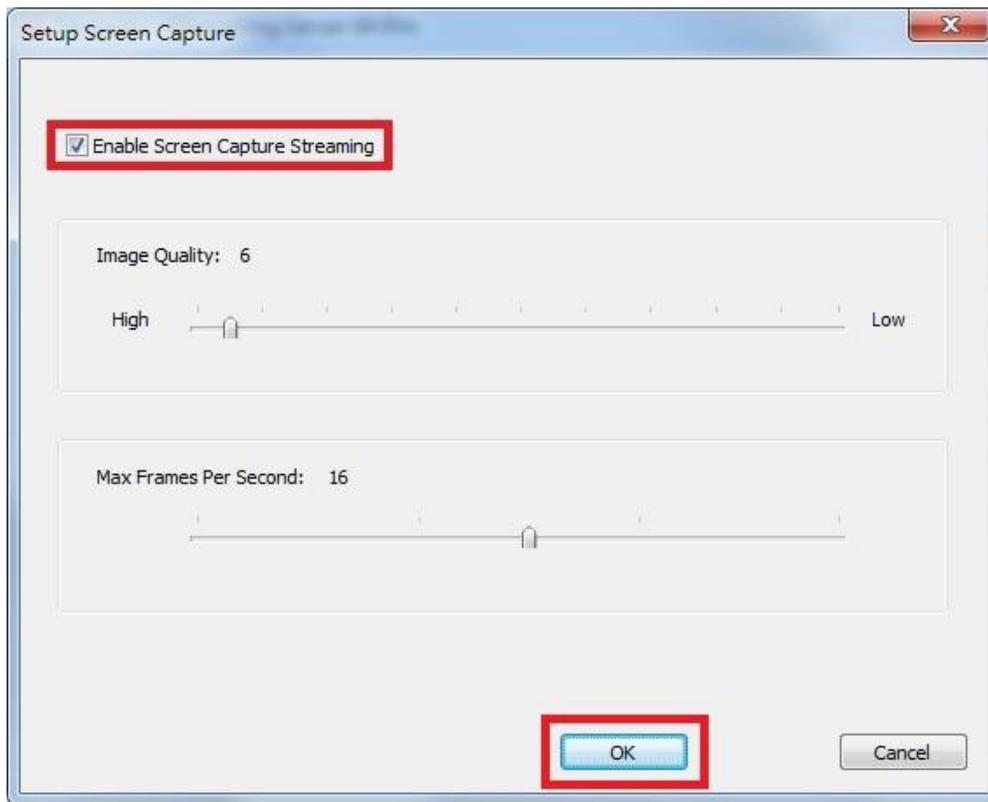

1. Launch Navigator from a PC you would like to capture the desktop.
2. Click Navigator MStreaming Server 64Bits icon, and then select Setup page.

3. Click the Setup Screen Capture button.

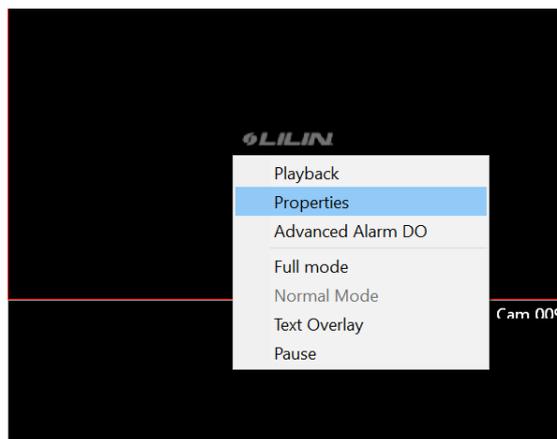

4. Check Enable Screen Capture Streaming, and then click the OK button.

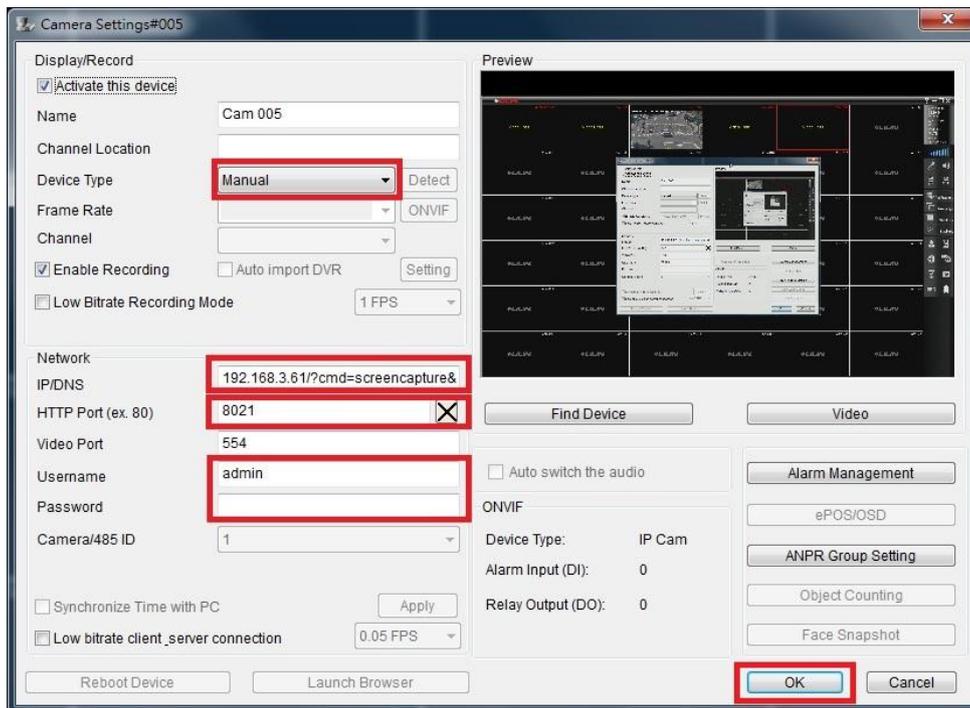

On Navigator PC #2

5. Launch Navigator, on the live display mouse right click and select Properties for entering the below settings.

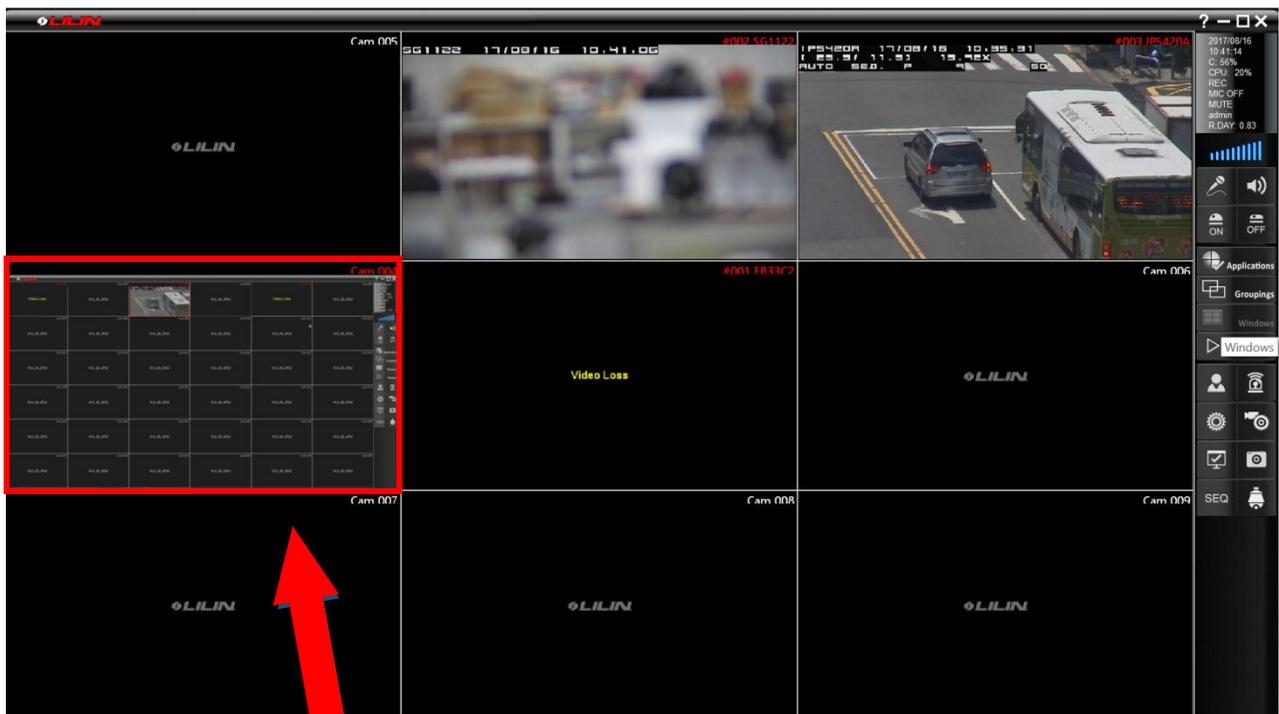

6. Set Device Type to Manual.
7. Key in a command **192.168.3.61/?cmd=screencapture&capmon=1** after IP/DNS.
The IP address belongs to PC1.
capmon=1 which means PC1's monitor 1, so if you would like to capture image from the 2nd. monitor, you could change the number 1 to 2. (The capmon number is up to 8)
8. The HTTP Port: 8021(default).

- Key in the PC1's NAV username and password.
Click OK button.

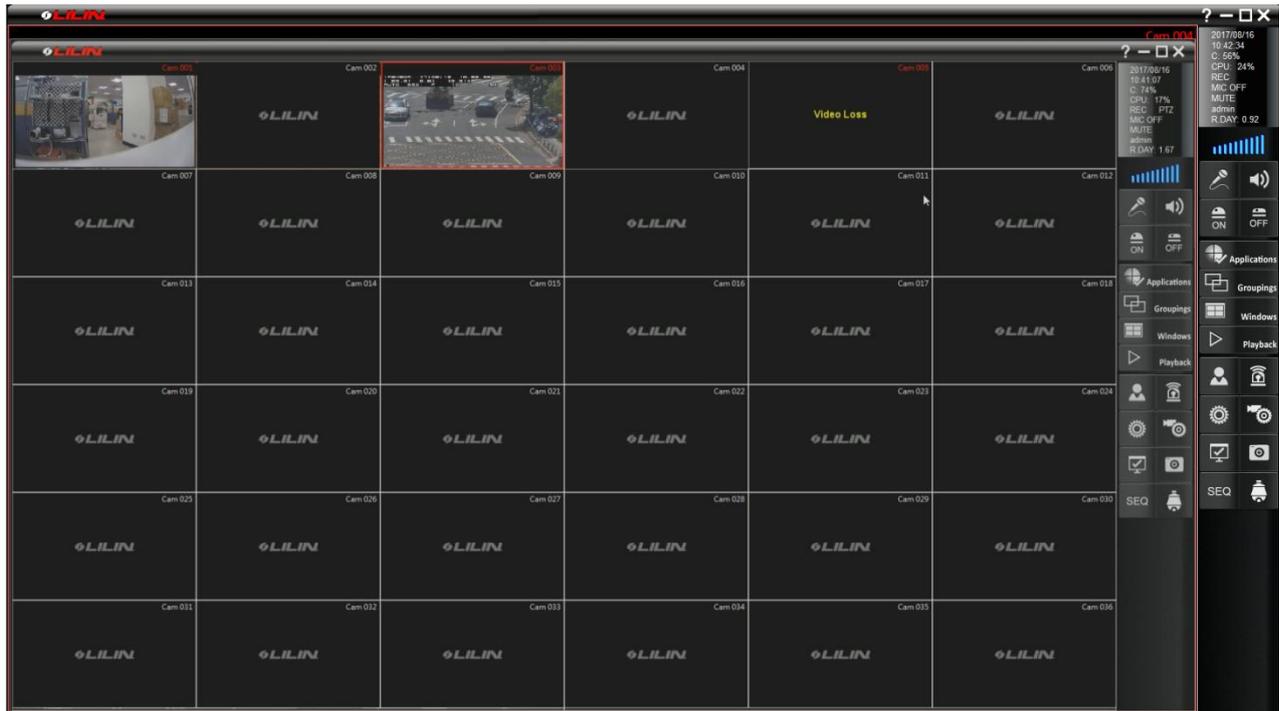

Then leave the camera setting and you should see on one channel the desktop of the first PC
In our example, channel 4 show the navigator of the first computer

If you double click on the new channel will display it in full screen.
