# Recover a device password from the LILINPro mobile app

If you have added an NVR to the LILINPro app but have since forgotten the NVR authentication password, it is possible to display the password currently used by the LILINPro app.

To do this follow the steps below:

1. Open the LILINPro app and select the 'Devices' option from the main menu.

2. Select 'Device Table' from the 3 options.

3. Tick the box next to the NVR you wish to see the password for. Doing this may expand the device tree and add a ticket to all the boxes, this is fine.

4. Next, press the 'Edit' icon located towards the top of the app.

5. The app will now show you camera 1 and all the details used to connect to that channel.

   Located next to the password field, you will see a small eye icon. Press this and the password will be displayed.
