

# Merit Lilin Technical Support Document

Document Number: Q00039

Date: 4/28/2010

Dept: Technical Support, Taipei

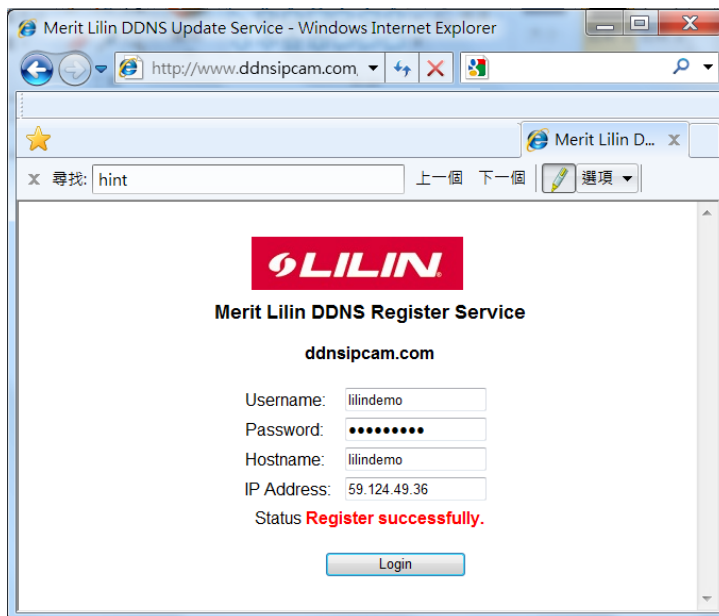

**Subject:** How to use LILIN DDNS service

**Description:** The purpose of LILIN DDNS service is to provide free Domain Name service (DNS) for LILIN IP cameras and DVRs. The Domain Name is for translating the IP address to Domain Name where numerical-based IP address is hard to remember.

LILIN's Dynamic DNS (DDNS) is able to be updated if the IP address gets changed by LILIN's IP cameras or DVR products.

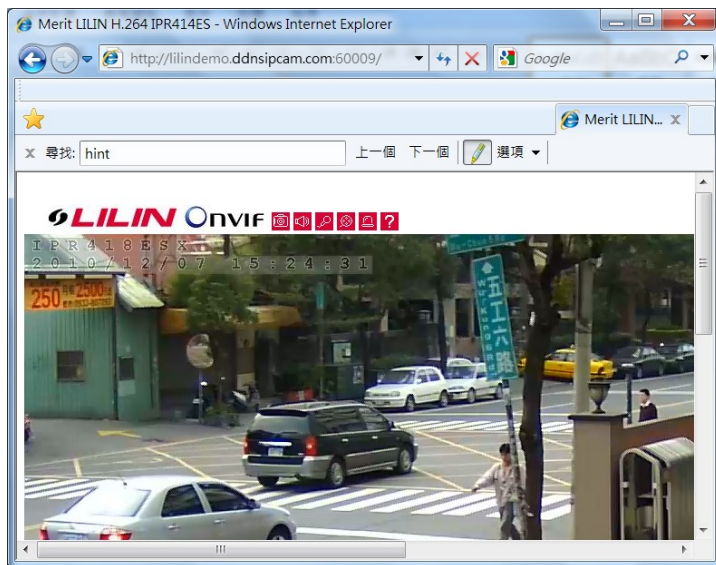

To use LILIN's DDNS service, please login to LILIN's DDNS service at [www.ddnsipcam.com](http://www.ddnsipcam.com) or [ddnsipcam.com](http://ddnsipcam.com). To register, please provide:

1. Username: Account name of the domain name
2. Password: Password of your account
3. Hostname: Domain name prefix
4. IP address: IP camera or DVR's IP address

Once the hostname has been registered, you can use the registered Domain Name (hostname) for your IP camera or DVR.

In above example, "lilindemo" is registered. After the registration, [lilindemo.ddnsipcam.com](http://lilindemo.ddnsipcam.com) is the Domain Name of your IP camera or DVR for IP address. You can use the Domain Name to address your IP camera or DVR via LILIN CMX, Internet Browser, and/or other software.

For LILIN's DDNS server ([www.ddnsipcam.com](http://www.ddnsipcam.com)), all LILIN's DVR, NVR, NDR, and IP cameras use the last 6 digits of MAC address for LILIN DDNS's account and host name. By default, if the IP camera is in the Internet and the DDNS service at [www.ddnsipcam.com](http://www.ddnsipcam.com) is enabled, a user can use the last 6 digits and ddnsipcam.com to access an IP camera.
