

# How am I notified when someone activates the LILIN Door Station

- When the Door Station ring button is pressed, if notifications have been configured correctly you will receive a push notification on any device running LILIN Viewer with the Door Station camera added on it.

\*This requires internet connectivity.

- The push notifications can be displayed on your devices home screen and notification area for quick access and viewing of the Door Station camera. This will allow you to see who has activated the Door Station and then speak directly to that person and even unlock the door if required.

- As well as sending a notification, the LILIN Viewer App will also log under the App's alarm section, all Door Station activations.
- If an SD Card has been installed in the Door Station, then it is possible to review historical events recorded to the SD card.
- To view live events, press the text of the event, to view recorded footage, press the blue arrow.
