# How to change the SIP extension dialled by the Door Station when the ring button is pushed.

- To change the extension that is dialled when the ring button on the front of the Door Station is pressed, log in to the Door Stations' web interface and select **'Setup'** from the top right hand side of the live display page.

- Once in **'Setup'** select **'Advance Mode'** from the bar at the top.

- Now select **'network'** and then **'SIP'**.

- Under the SIP screen you have an Extension dropdown, this is where you configure your SIP call details. The Door Station will allow up to 8 different SIP extensions to be programed for outbound dialling.

- Select the required extension number and then fill in all the details required for that extension to be able to dial out. Once this is done select **'Submit'**.

- Now the correct extension details have been added, you will need to adjust the ring button function. To do this select **'Event'** from the top menu bar and then select **'Door Station'** from the left hand menu and then the **'Ring button'** option.

- Once in the **'Ring Button'** screen adjust the SIP extension option at the bottom of the page. Finally, select the SIP extension you would like to dial once the ring button has been pressed.
